

MR62/MR63 Multifunction Electrode Pads Release Note.

Date: 05/01/2026

Material update for MR62/MR63 multifunction electrode pads (RN25-31_Defibrillator_Accessory(MR62MR63)_20251222_ENG)

To save storage space on new L-Series AED portfolio, the packaging of MR62/MR63 pads has been optimized as follows:

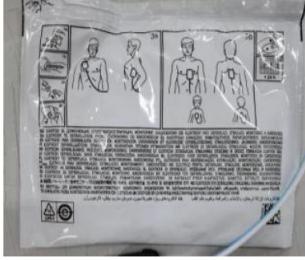

- The length of the packaging has been reduced from 200mm to 175mm (width remains the same).
- The diameter of the connecting wire has been changed from 2.83mm to 1.95mm.
- The multilingual layout on the back has been adjusted.
- The front layout of MR63 has been adjusted, retaining all original information and only changing the position.

By the end of 2025, MR62/MR63 pads will be switched to the smaller packaging version. During this period, both old and new packaging will be shipped randomly, without affecting the original functions, performance, and compatibility of MR62/MR63.

The packaging bags before and after the update are shown below:

	Before the update	After the update
MR62 (including 3- year ver. and 5-year ver.)	 <p>200mm</p>	 <p>175mm</p>

MR62/MR63 Multifunction Electrode Pads Release Note.

		
MR63	 <p>200mm</p>  <p>175mm</p>	

Best regards

JJ. Vincent.
